

# Branding your StingRay Web Browser Interface

v 1.1  
30<sup>th</sup> September 2009

**Hermstedt StingRay**  
The multi protocol File Transfer Server

## Branding your StingRay web interface

In order to customise the branding of your StingRay external web interface with your company logo you must be running firmware version 2.5.2-2 as a minimum. The StingRay firmware updates are available from the following web link:

[http://www.hermstedtstingray.com/update\\_files](http://www.hermstedtstingray.com/update_files)

Upon running firmware version 2.5.2-2 or above you will be provided with the following section available to you from the Network Configuration page under System Management.

The screenshot shows the 'External Webaccess' configuration page. It includes a status indicator (green dot), a 'Save' button, and a 'Custom Weblogo' section with a 'Browse...' button. At the bottom right, there are buttons for '?', 'Import', and 'Default Logo'.

To brand the StingRay with your logo you'll initially need to create the logo to upload. The specifications for the logo are as follows:

<b>Width</b>	Unlimited
<b>Height</b>	71 pixels
<b>Resolution</b>	72dpi
<b>File format</b>	.png
<b>Other</b>	Transparent background required

Once you have created the logo you can simply click the Edit button below the section highlighted above, then browse to the logo and click the import button. If for any reason there is a problem with your logo you can return to the default logo by clicking the Default Logo button shown above.

For further assistance please contact Pro2col Support on 0333 123 1260.
